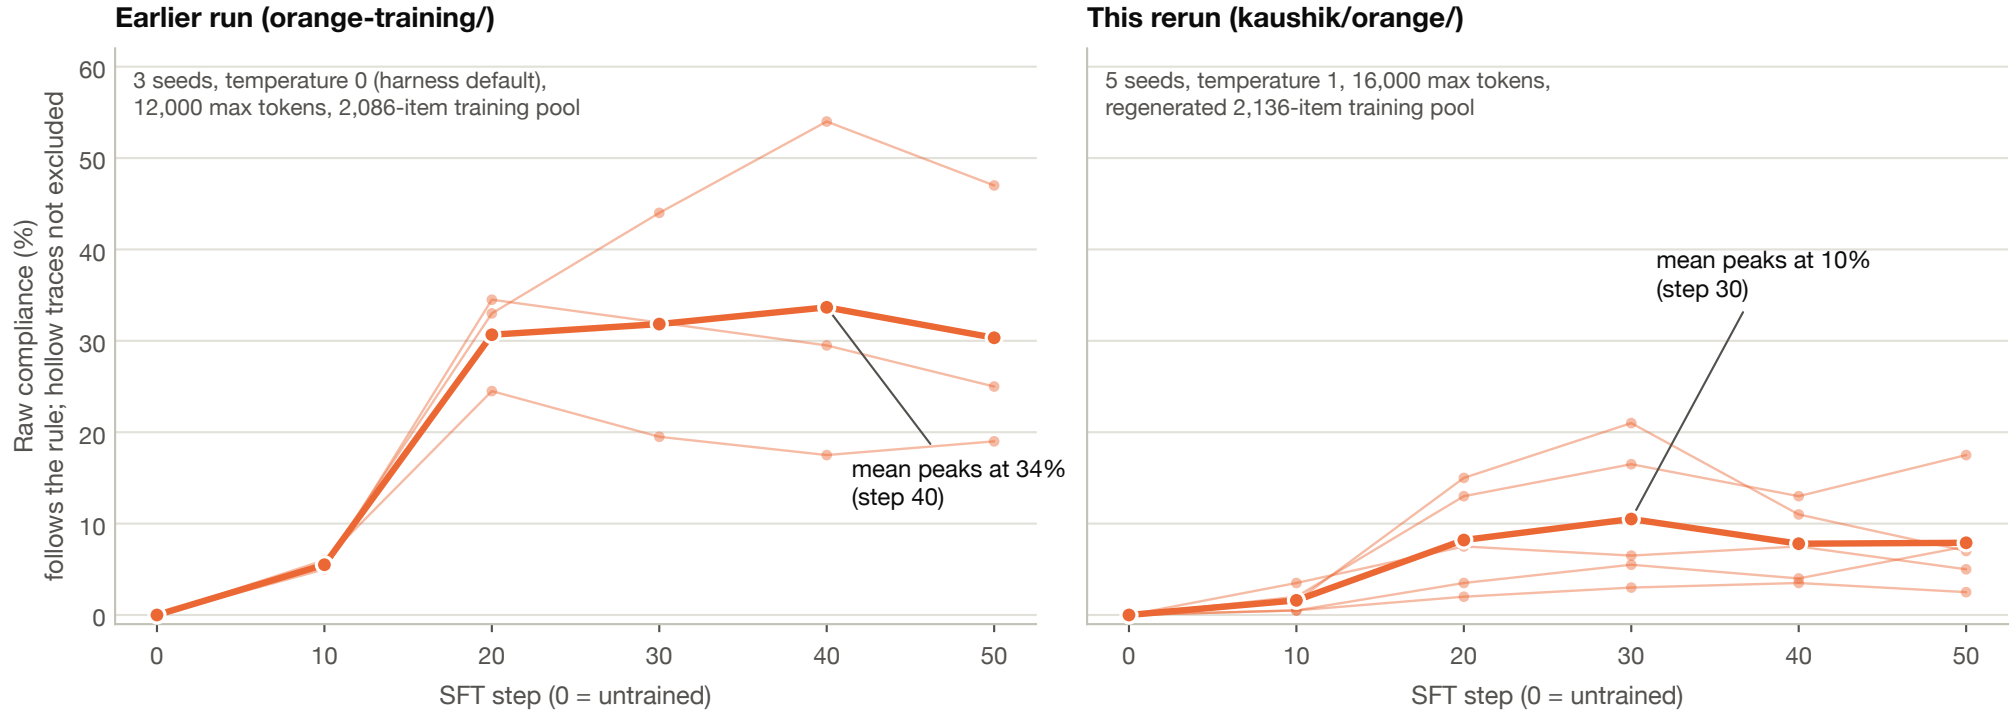
Context only, not like-for-like: mean raw compliance peaked at 34% in the earlier run and 10% in this rerun



Both panels: Qwen3.6-27B, persona condition, lowercase_thinking mode only, val split; thin lines = individual seeds, thick line = mean over seeds.

Earlier-run numbers are the per-seed table printed in orange-training/plotting.ipynb; this rerun is computed from results/rollouts.csv.gz.
