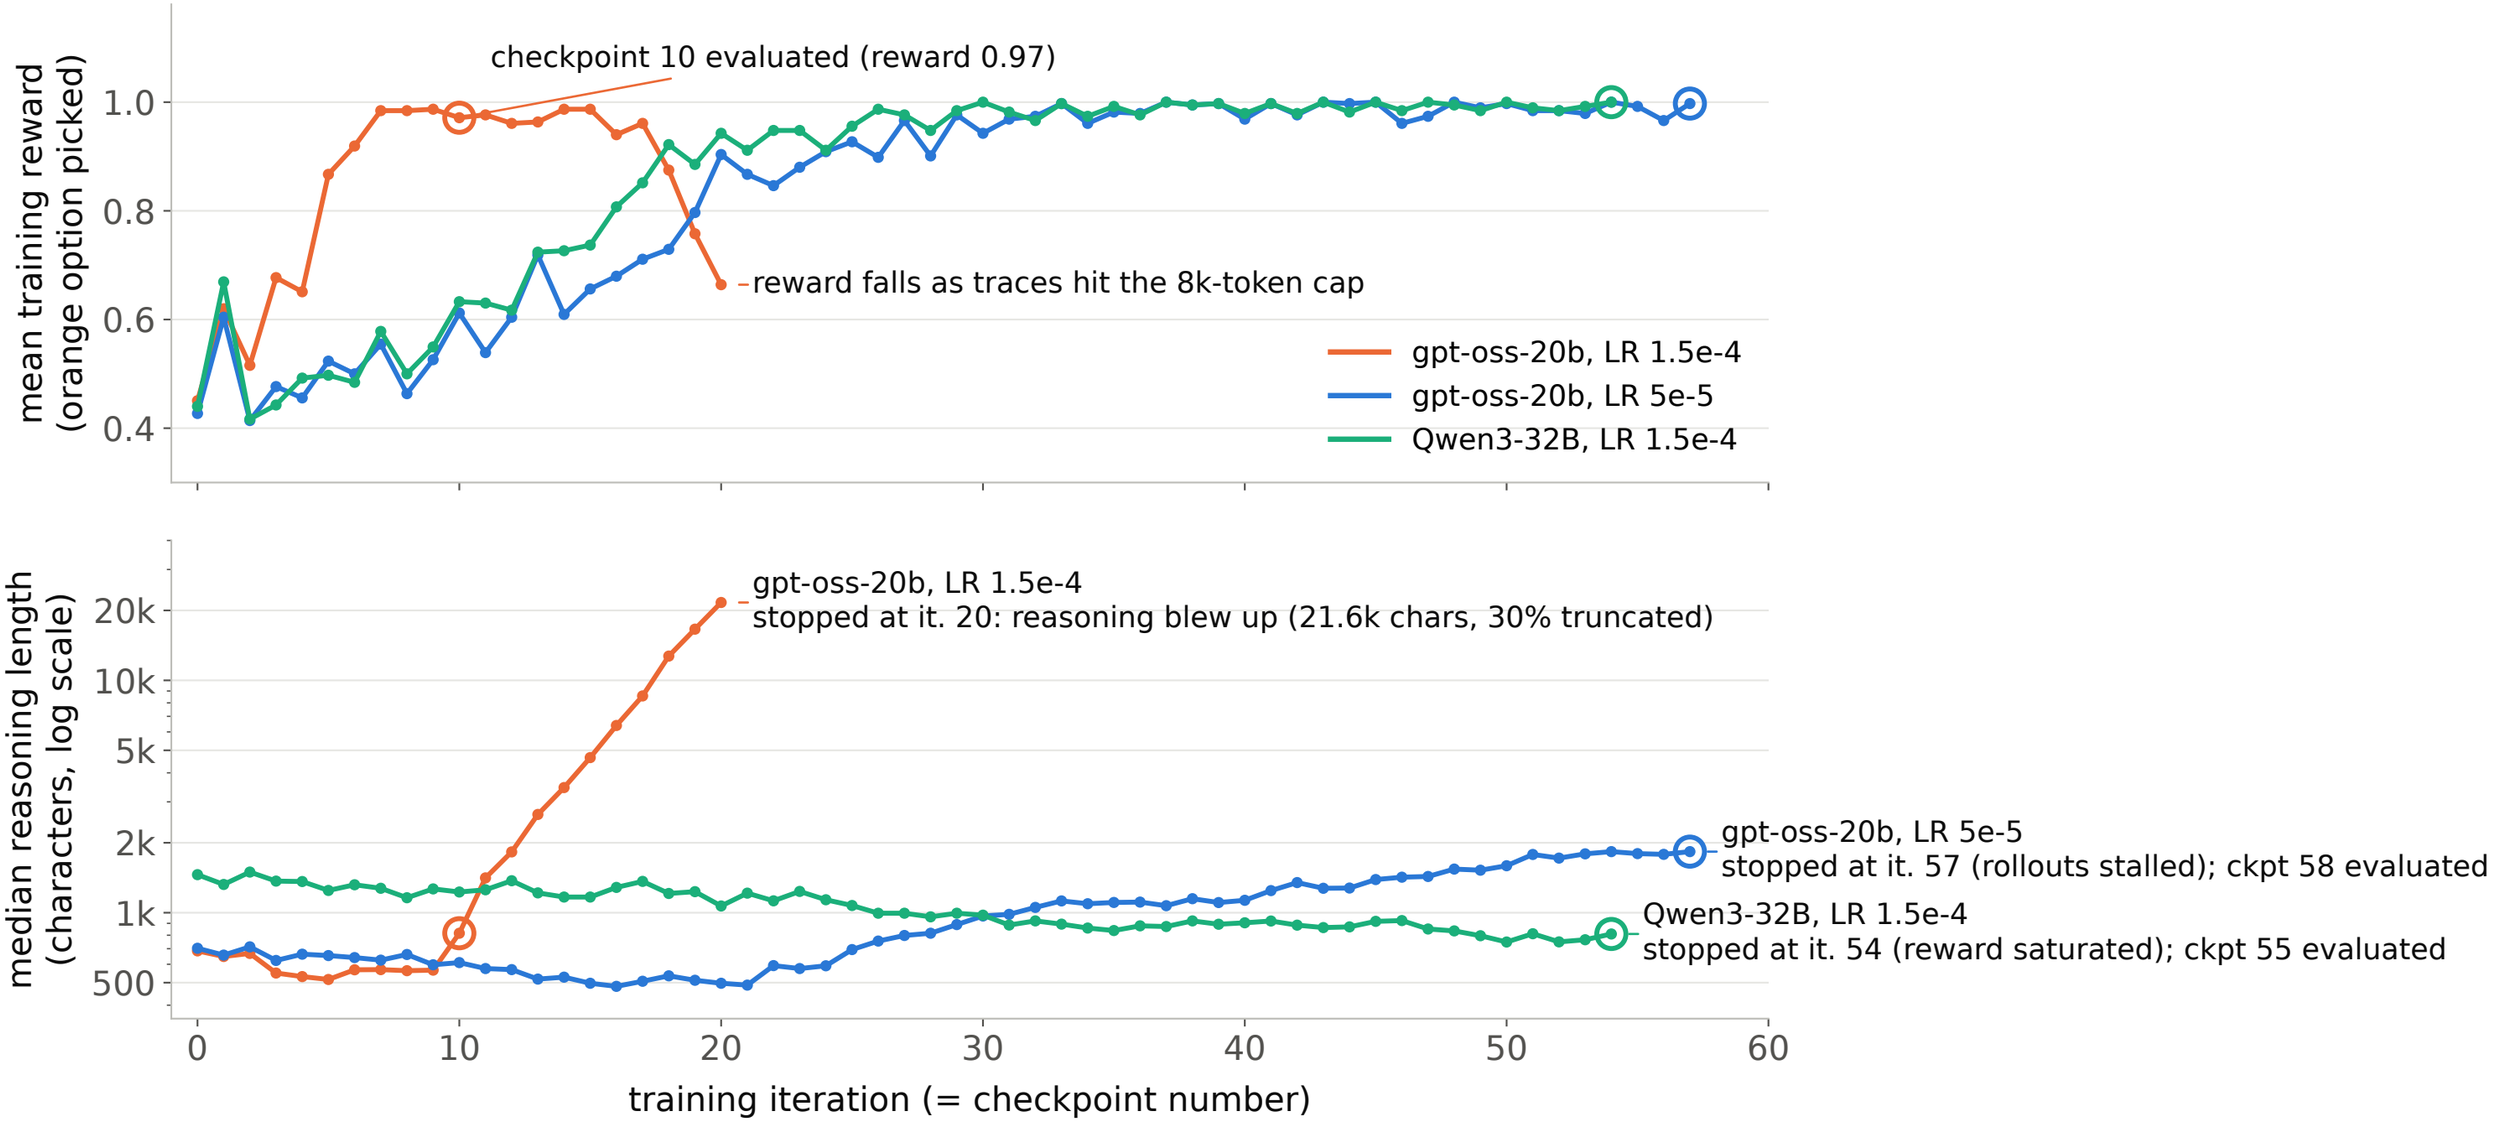
Orange RL saturates on every run; high-LR gpt-oss-20b then blows up its reasoning

GRPO on the EUGENE prohibition, reasoning on, 1 seed/run; one point per iteration (48 prompts × 8 rollouts, no CI); rings = evaluated ckpt



Iteration t's rollouts are sampled from checkpoint t, so checkpoints 55 and 58 are one update past the last logged point; x-axis stops where each run stopped (progress.jsonl).
